

Software Requirements Specification (SRS) - QuizMania Quiz App with Rewards System

1. Introduction QuizMania is a quiz application that allows users to participate in quizzes by loading funds and competing with other users. The app offers a rewards system where winners can withdraw their winnings. This document outlines the detailed software requirements for QuizMania, including its functionalities, user interactions, and the rewards system.

2. Scope The QuizMania app aims to provide an engaging platform for users to participate in quizzes and compete for rewards. It enables users to load funds into their accounts, play quizzes, and withdraw their winnings. The rewards system follows the logic of allocating 70% of the loaded fund as the winning amount, with the potential for increasing rewards.

3. Functional Requirements 3.1 User Registration and Authentication

- Users should be able to register with the app by providing their personal information, including name, email, and password.
- The app should authenticate users during login to ensure secure access.

3.2 Quiz Management

- The app should provide an admin interface to manage quizzes.
- The admin should be able to create, edit, and delete quiz questions and answers.
- Each quiz should have a time limit for completion.

3.3 Fund Loading

- Users should be able to load funds into their accounts using various payment methods, such as credit cards, digital wallets, or bank transfers.
- The app should securely process and store user payment information.

3.4 Quiz Gameplay

- Users should be able to select a quiz category and start a quiz.
- The app should display multiple-choice questions to the user, along with the available answer options.
- Users should be able to select an answer for each question within the allotted time.

- The app should calculate and display the user's score at the end of the quiz.

3.5 Leaderboard and Rewards

- The app should maintain a leaderboard that displays the top scorers and their winnings.
- The winning amount should be calculated as 70% of the loaded funds.
- The app should increase the winning amount for future quizzes based on the same logic (e.g., 70% of the newly loaded funds).
- Winners should be able to withdraw their winnings through the app.
- The app should handle the withdrawal process securely and efficiently.

3.6 Notifications

- The app should send notifications to users regarding upcoming quizzes, quiz results, and account updates.

3.7 Account Management

- Users should be able to update their account information, such as name, email, and password.
- The app should provide a secure mechanism for users to reset their passwords in case of forgotten credentials.

4. Non-Functional Requirements 4.1 Usability

- The app should have an intuitive and user-friendly interface.
- The user interactions should be smooth and responsive.
- The app should support multiple languages.

4.2 Security

- The app should use secure encryption algorithms to protect user data and payment information.
- User authentication should be implemented to ensure that only authorized users can access the app.
- Proper access controls should be in place to prevent unauthorized access to admin functionalities.

4.3 Performance

- The app should be able to handle multiple concurrent users without significant performance degradation.
- The response time for loading quizzes and submitting answers should be minimal.

4.4 Scalability

- The app should be designed to accommodate a growing user base and increasing quiz participation.
- The system should be scalable to handle a large number of quizzes and users.

5. Constraints

- The app should comply with relevant data protection and privacy laws and regulations.
- The development of the app should consider the available technology stack and resources.

6. Assumptions and Dependencies

- The app assumes that users have a stable internet connection to interact with the QuizMania app.
- The app depends on secure payment gateway integration to facilitate fund loading and withdrawal transactions.
- The app assumes that users have compatible devices (smartphones, tablets, or computers) capable of running the QuizMania app.

7. System Architecture The QuizMania app can be developed as a client-server architecture. The client-side can be implemented as a mobile application (iOS and Android) and a web application, while the server-side can be developed using appropriate technologies and frameworks (e.g., Node.js, Django, or Ruby on Rails).

8. User Interface The user interface should be designed with a modern and intuitive layout, incorporating the following components:

- Registration and login screens
- Dashboard displaying available quizzes, leaderboard, and account information
- Quiz selection screen
- Quiz question and answer display screen
- Leaderboard screen showing top scorers and winnings

- Account management screens for profile updates and password reset
- Fund loading and withdrawal screens

9. Testing Requirements Comprehensive testing should be performed to ensure the quality and reliability of the QuizMania app. This includes:

- Unit testing of individual components and functionalities
- Integration testing to verify the proper interaction between different modules
- Performance testing to evaluate the app's responsiveness under various user loads
- Security testing to identify and address vulnerabilities in the app's architecture and data handling processes

10. Documentation Requirements A user manual should be provided, offering instructions on how to navigate and use the QuizMania app. The documentation should include the following:

- Installation and setup guide
- User registration and login instructions
- Fund loading and withdrawal procedures
- Quiz gameplay instructions
- Account management guidelines
- Troubleshooting and FAQ section

11. Maintenance and Support Regular maintenance and support should be provided to ensure the smooth functioning of the QuizMania app. This includes:

- Bug fixes and updates to address reported issues
- Compatibility updates to support new device platforms and operating system versions
- Server maintenance and optimization to handle increased user loads
- User support channels (such as email or live chat) to assist users with their queries and concerns

This concludes the detailed Software Requirements Specification (SRS) for the QuizMania Quiz App with a rewards system. The provided information outlines the functionalities, user interactions, and the logic behind the rewards and withdrawal system.

Updated Software Requirements Specification (SRS) - QuizMania Quiz App with Rewards System

1. Introduction

QuizMania is an interactive quiz application that offers three types of quiz contests: Live Contest Challenge, Normal Contest, and Faster Finger First. The app allows users to participate in quizzes by loading funds and compete with others for rewards. Winners can withdraw their winnings instantly if the amount is 1000 or below. For higher amounts, there will be a buffering period of 20 days. This document outlines the detailed software requirements for QuizMania, including its functionalities, user interactions, and the rewards system.

2. Scope

The QuizMania app aims to provide an engaging platform for users to participate in various types of quizzes and compete for rewards. It enables users to load funds into their accounts, play quizzes with interactive UI featuring animations, videos, and images, and withdraw their winnings instantly for amounts up to 1000. For higher amounts, there will be a 20-day buffering period before withdrawals are processed.

3. Functional Requirements

3.1 User Registration and Authentication

Users should be able to register with the app by providing their personal information, including name, email, and password.

The app should authenticate users during login to ensure secure access.

3.2 Quiz Management

The app should provide an admin interface to manage quizzes.

Admins should be able to create Live Contest Challenge quizzes by manually setting the questions.

The app should have a question database for Normal Contest quizzes, with questions randomly selected during gameplay.

Faster Finger First quizzes should be timer-based, with questions displayed to users who can answer quickly.

3.3 Fund Loading

Users should be able to load funds into their accounts using various payment methods, such as credit cards, digital wallets, or bank transfers.

The app should securely process and store user payment information.

3.4 Quiz Gameplay

Users should be able to select the type of quiz contest they want to participate in (Live Contest Challenge, Normal Contest, or Faster Finger First).

The app should display questions with interactive UI, including animations, videos, and images, to enhance the quiz experience.

Users should be able to select an answer within the allotted time for each question.

3.5 Leaderboard and Rewards

The app should maintain a leaderboard that displays the top scorers and their winnings.

The winning amount for each contest type should be calculated as a percentage of the loaded funds.

For amounts up to 1000, winners should be able to withdraw their winnings instantly.

For higher amounts, there should be a buffering period of 20 days before withdrawals are processed.

3.6 Notifications

The app should send notifications to users regarding upcoming quizzes, quiz results, and account updates.

3.7 Account Management

Users should be able to update their account information, such as name, email, and password.

The app should provide a secure mechanism for users to reset their passwords in case of forgotten credentials.

4. Non-Functional Requirements

4.1 Usability

The app should have an intuitive and interactive interface, with engaging animations, videos, and images during quiz gameplay.

User interactions should be smooth, responsive, and visually appealing.

The app should support multiple languages.

4.2 Security

The app should use secure encryption algorithms to protect user data and payment information.

User authentication should be implemented to ensure that only authorized users can access the app.

Proper access controls should be in place to prevent unauthorized access to admin functionalities.

4.3 Performance

The app should be able to handle multiple concurrent users without significant performance degradation.

The response time for loading quizzes, displaying questions, and submitting answers should be minimal.

4.4 Scalability

The app should be designed to accommodate a growing user base and increasing quiz participation.

The system should be scalable to handle a large number of quizzes and users.

5. Constraints

The app should comply with relevant data protection and privacy laws and regulations.

The development of the app should consider the available technology stack and resources.

6. Assumptions and Dependencies

The app assumes that users have a stable internet connection to interact with the QuizMania app.

The app depends on secure payment gateway integration to facilitate fund loading and withdrawal transactions.

The app assumes that users have compatible devices (smartphones, tablets, or computers) capable of running the QuizMania app.

7. System Architecture

The QuizMania app can be developed as a client-server architecture. The client-side can be implemented as a mobile application (iOS and Android) and a web application, while the server-side can be developed using appropriate technologies and frameworks (e.g., Node.js, Django, or Ruby on Rails).

8. User Interface

The user interface should be designed with a modern and interactive layout, incorporating the following components:

Registration and login screens

Dashboard displaying available quizzes, leaderboard, and account information

Quiz selection screen with options for Live Contest Challenge, Normal Contest, and Faster Finger First

Quiz question and answer display screen with interactive UI elements (animations, videos, images)

Leaderboard screen showing top scorers and winnings

Account management screens for profile updates and password reset

Fund loading and withdrawal screens

9. Testing Requirements

Comprehensive testing should be performed to ensure the quality and reliability of the QuizMania app. This includes:

- Unit testing of individual components and functionalities

- Integration testing to verify the proper interaction between different modules

- Performance testing to evaluate the app's responsiveness under various user loads

- Security testing to identify and address vulnerabilities in the app's architecture and data handling processes

10. Documentation Requirements

A user manual should be provided, offering instructions on how to navigate and use the QuizMania app. The documentation should include the following:

- Installation and setup guide

- User registration and login instructions

- Fund loading and withdrawal procedures

- Quiz gameplay instructions for each contest type

- Account management guidelines

- Troubleshooting and FAQ section

11. Maintenance and Support

Regular maintenance and support should be provided to ensure the smooth functioning of the QuizMania app. This includes:

- Bug fixes and updates to address reported issues

- Compatibility updates to support new device platforms and operating system versions

- Server maintenance and optimization to handle increased user loads

- User support channels (such as email or live chat) to assist users with their queries and concerns

This concludes the updated Software Requirements Specification (SRS) for the QuizMania Quiz App with a rewards system. The provided information incorporates the three types of quizzes, interactive UI elements, instant withdrawals for lower amounts, and a 20-day buffering period for higher amounts.

3

1. Login (Passcode system) /Register Screen (as per book doc):
 - Welcome message
 - Username and password fields
 - Login and Register buttons
2. Home Screen:
 - App logo and title
 - Navigation menu or tabs
 - Featured quizzes or categories
3. Quiz Selection Screen:
 - List of available quizzes: Live Contest, Challenge, Fast N Correct
 - Search bar or filters for quiz contest
 - Start quiz button for each quiz
4. Quiz Instruction Screen:
 - Quiz title and description
 - Number of questions and time limit (if applicable)
 - Start quiz button
5. Question Screen:
 - Question text
 - Options (multiple-choice, true/false, etc.)
 - Next button to proceed to the next question
6. Result Screen:
 - Score and performance summary
 - Feedback or congratulatory message
 - Share score on social media buttons
 - Retry or play again button
7. Leaderboard Screen:
 - Top scores or rankings
 - User's position and score
 - Search or filter options for the leaderboard
8. Profile Screen:
 - User's profile picture
 - Username and other personal information
 - Edit profile or settings button
9. Achievements Screen:
 - List of achievements or badges
 - Progress bar or statistics

- Details about each achievement

10. Settings Screen:

- General app settings (notifications, sound, etc.)
- Account settings (change password, logout)
- Language or theme customization options

11. About Screen:

- App information and version
- Developer credits and contact information
- Privacy policy and terms of service

12. Tutorial/Onboarding Screens:

- Introduction to the app and its features
- Guided steps on how to use the app
- Skip tutorial or continue button

13. Category Selection Screen:

- List of quiz categories or topics
- Icons or images representing each category
- Select category button or checkbox

14. Hint Screen:

- Button to request a hint for the current question
- Hint text or image displayed upon request
- Close or dismiss hint button

15. Review Screen:

- List of answered questions
- Status indicators for correct and incorrect answers
- Navigation buttons to revisit specific questions

16. Confirmation Screen:

- Confirm submission or completion of the quiz
- Review answers before final submission
- Cancel or go back option

17. Error/Warning Screen:

- Displayed when there is an error or issue
- Error message or warning notification
- Suggestions or instructions to resolve the error

18. Purchase Screen - contest wise ,contest can be paid or free:

- In-app purchases or premium features
- Pricing details and payment options

- Purchase button or upgrade options

19. Notifications Screen:

- List of quiz reminders or notifications
- Settings for managing notification preferences
- Clear all or mark as read option

20. Social Sharing Screen:

- Integration with social media platforms
- Share quiz results or achievements
- Customize message and choose platform

21. Feedback Screen:

- User feedback or rating prompt
- Text input field for comments or suggestions
- Submit or send feedback button

22. Help/FAQ Screen:

- Frequently asked questions and answers
- Search bar to find specific help topics
- Contact support or customer service information

23. Live video conferencing between host and the user who is winning screen with comment system

24. Knowledge Bank Screen (like blog)

25. My contest screen : Upcoming events , Running, Completed

26. Contest Completed Screen

27. Passbook
